Serial No. 10/527,140 Docket No. SHIG CPTA1402AU Amendment C

AMENDMENTS TO THE CLAIMS:

Please amend Claim 1 as shown below.

This listing of claims will replace all prior versions and listings of claims in the Application:

Claim 1 (currently amended): A blood flow visualizing diagnostic apparatus characterized by having:

an ultrasonic measurement unit which emits an ultrasonic signal toward a blood vessel inside a human body to receive <u>a</u> reflected ultrasonic signal;

an analysis processing unit which obtains a blood vessel shape and a blood flow velocity vector in the blood vessel by the received signal;

a simulation unit which sets computational lattices on the basis of the blood vessel shape obtained by said analysis processing unit to simulate the blood flow velocity vector and a pressure distribution;

a feedback unit which computes an error between the blood flow velocity <u>vector</u> obtained by said analysis processing unit and the blood flow velocity <u>vector</u> obtained by said simulation unit <u>in two dimensions</u> and feeds back the error to a number of representative points which are distributed over a blood flow domain in said computational lattices of said simulation unit,

wherein the error is computed as a difference between a component in the ultrasonic beam direction of the blood flow velocity vector obtained by said simulation unit and a corresponding component in the ultrasonic beam direction of the blood flow velocity vector obtained by said analysis processing unit; and

Serial No. 10/527,140 Docket No. SHIG CPTA1402AU Amendment C

a display unit which displays the blood flow velocity and the pressure distribution output from said simulation unit after the feedback.

Claim 2 (cancelled).

Claim 3 (Previously presented): The blood flow visualizing diagnostic apparatus as claimed in claim 1, wherein a difference in actual feedback is a blood flow force f (vector) in the Navier-Stokes equation expressed by the following equation:

$$f = -K\{(u_c \circ u_m / |u_m|^2) - 1\} u_m$$

where the vector \mathbf{u}_c is the blood flow velocity vector $[\mathbf{u}_o, \mathbf{v}_c, \mathbf{w}_c,]$ obtained by said simulation unit, the vector \mathbf{u}_m is the blood flow velocity vector $[\mathbf{u}_m, \mathbf{v}_m, \mathbf{w}_m]$ in the ultrasonic beam direction obtained by said analysis processing unit, $\mathbf{u}_c \circ \mathbf{u}_m / \|\mathbf{u}_m\|^2$ is a projection of \mathbf{u}_c in the ultrasonic beam direction normalized with $\|\mathbf{u}_m\|$, and K is a gain of the feedback.

Claim 4 (cancelled).
